Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/855,641

Applicant(s)

SAN ET AL.

Examiner

Regina Liang

Art Unit

2629

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 June 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 135-153 and 186-205 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 135-153, 186-205 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

Art Unit: 2629

DETAILED ACTION

1. This Office Action is responsive to amendment filed 6/6/07. Claims 135-153, 186-205 are pending in the application.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 135-153, 186-205 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-57 of U.S. Patent No. 5,388,841 in view of Logg (US 5,415,549).

The following is the example for comparing claim 135 of this application and claim 43 of US 5,388,841.

Claim 135 of this application	claim 43 of US 5,388,841
a home video game system for use with a television type monitor display device, comprising:	a video game system for use with a television type display comprising:
a game program processing unit for executing at least a portion of a videographics game program that includes instructions for drawing one or more trapezoids for constructing and displaying 3D objects; and a video RAM for providing video frame data to a display device; and	a game microprocessor for executing instructions of a video game program, and a picture processing unit coupled to said game microprocessor for performing picture processing tasks under the control of said game microprocessor; a program memory for storing said video game program; and
a programmable graphics processor unit connected to the game program processing unit for receiving information relating to one or more trapezoids for constructing and displaying 3D graphic objects, the graphics processor programmed to process pixel data for subsequent transfer to said video RAM corresponding to one or more portions of	A programmable graphics processor coupled to said program memory and connected in used to said game microprocessor for executing at least some of said video game program instructions; said game microprocessor and picture processing unit are embodied in a video game system main processing unit and said

trapezoids for constructing 3D objects to be displayed.	program memory and graphics processor are embodied within a video game cartridge.
---	---

From the comparison above, claim 135 of this application differs from claim 43 of US 5,388,841 in not having instructions for drawing one or more trapezoids for displaying 3D objects.

However, Logg is cited to teach a game device which uses polygon graphics to simulate 3D images (col. 2, lines 10-14), and it is inherent that a polygon is composed of a plurality of adjacent trapezoids. Thus it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify **the game microprocessor** in claim 43 of US 5,388,841 to include instructions for drawing one or more trapezoids for displaying polygon-based 3D objects so as to simulate 3D images in the video game device.

Claim Rejections - 35 USC § 103

5. Claims 135, 136 are rejected under 35 U.S.C. 103(a) as being unpatentable over Loffredo (US 5,016,876) in view of Logg.

As to claim 135, Fig. 1 of Loffredo discloses a home video game system for use with a television type monitor display device, comprising: a game program processing unit (digital computer 22, col. 4, line 53 to col. 5, line 2, col. 5, lines 54-56) for executing at least a portion of a videographics game program that includes instructions for displaying objects; a video RAM (34) for providing video frame data to a display device; and a programmable graphics processor unit (coprocessor 130) connected to the game program processing unit for receiving information relating graphic objects for constructing and display graphic objects from the game program

processing unit, the programmable graphics processor programmed to process pixel data for subsequent transfer to the video RAM for constructing the objects for display on the television type monitor display (col. 9, line 23 to col. 10, line 2).

Loffredo does not explicitly disclose the instructions for drawing one or more trapezoids for displaying 3D objects. However, Loffredo teaches his video game device having the capability to create a composite scene by overlaying successive planes image data so as to allow a real-time animation of composite scenes. Logg teaches a game device have used polygon graphics to simulate 3D images (col. 2, lines 10-14), and it is inherent that a polygon is composed of a plurality of adjacent trapezoids. Thus it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the game device of Loffredo to include instructions for drawing one or more trapezoids for displaying polygon-based 3D objects to simulate 3D image as taught by Logg so as to simulate 3D images in a real-time animation in the video game device of Loffredo.

As to claim 136, Loffredo teaches the programmable graphics processor (130) is a coprocessor.

6. Claims 137-153, 186-205 are rejected under 35 U.S.C. 103(a) as being unpatentable over Loffredo and Logg as applied to claim 98 above, and further in view of "PC TECH JOURNAL, "Custom-Tailored Graphics: TMS 34010, by Ed McNierney; hereafter McNierney).

The combination of Loffredo with Logg teaches the claimed invention, but does not disclose the internal architecture of the processor. However, McNierney discloses the internal architecture of the processor that includes a coprocessor that has a high-speed arithmetic logic

Art Unit: 2629

unit and programmable instruction cache that allows it to fetch instructions in parallel with executing instructions and accessing registers and local memory. Thus it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the graphic processor of Loffredo as modified by Logg to have the internal architecture as taught by McNierney for faster data access processing.

As to claims 137, 139-152, 189-201, McNierney discloses in page 68 last column last paragraph Tms34010 that is a pipelined processor and includes an Arithmetic Logic Unit, barrel shifter (multiplier unit that performs multiply operation using at least 16-bit length, a cache RAM and plurality of registers and also is capable of performing graphics-intensive tasks like rotation or scaling of polygon based objects. In addition the TMS34010 include the pixel plotting circuit (page 68-70), and it includes a set of instructions (page 71) an instruction for texture mapping and an instruction for controlling transparency of display object and an instruction for fractional signed multiply instruction are included in the set (page 73). McNierney also discloses in page 71 that graphics processor incorporates an arithmetic Logic Unit, cache RAM, high speed multiplier and plurality of register fabricated on a single chip.

As to claims 153, 187, Loffredo does not disclose a CD ROM reader device. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the memory storage of Loffredo to have a CD ROM to improve the video game by permitting a different game memory with instructions and data for a different game to be substituted.

As to claim 188, Loffredo teaches the programmable graphics processor (130) is a coprocessor.

As to claim 138, 203, 205, Loffredo discloses in col. 3, lines 24-27 DMA transfer of pixel data to video RAM.

As to claims 186, 202, 204, the combination of Loffredo with Logg teaches the claimed invention as discussed in claim 135 above. Furthermore, McNierney discloses in page 70 the first and second column computing display screen position coordinates for the rotate/or scaled polygon-based object; further Loffredo teaches in col. 5, line 54 to col. 6, line 25 writing pixel color information corresponding to the rotated/or scaled polygon-based object to the video RAM.

Response to Arguments

7. Applicant's arguments filed 6/6/07 have been fully considered but they are not persuasive.

Applicant's remarks regarding the double patenting rejection on page 11 are not persuasive since the feature of "a graphics processor for executing a videographics program that includes instructions for drawing one or more trapezoids for the construction and display of 3D object" is taught by Logg, see the rejection above.

Applicant's remarks Loffredo and Logg on page 12 are not persuasive. Logg teaches a game device having a program which has used polygon graphics to simulate 3D images, and it is inherent that a polygon is composed of a plurality of adjacent trapezoids. Thus, the game device of Logg having instructions for drawing one or more trapezoids used displaying and simulating 3D graphic objects. Therefore, the combination of Loffredo and Logg renders the claims obvious.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Engelse et al (US 5,060,172) teaches a polygon composed of a plurality of adjacent trapezoids (col. 1, lines 24-32).

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

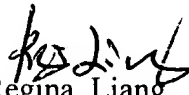

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Regina Liang whose telephone number is (571) 272-7693. The examiner can normally be reached on Monday-Friday from 8AM to 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Hjerpe, can be reached on (571) 272-7691. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
